

Ideation Phase

Empathize & Discover

Date	14 feb 2026
Team ID	LTVIP2026TMIDS35912
Project Name	Deep Learning Fundus Image Analysis for Early Detection of Diabetic Retinopathy
Maximum Marks	4 Marks

Empathy Map Canvas:

○

Pains (Problems / Challenges)	Gains (Benefits / Value)
Late Detection - Diabetic retinopathy often shows no early symptoms - Many patients are diagnosed only after vision damage Manual Screening Dependency - Requires trained ophthalmologists - Time-consuming and costly process Limited Access to Healthcare - Rural and remote areas lack eye specialists - Regular screening is difficult Human Error - Fatigue and subjective judgment can affect diagnosis accuracy	Early Detection - Identifies diabetic retinopathy at early stages - Prevents vision loss and blindness Automated Diagnosis - Deep learning models analyze images automatically - Reduces workload on doctors High Accuracy - CNN-based models detect subtle retinal patterns - Consistent and reliable predictions Scalable Screening - Can process large numbers of images quickly - Suitable for mass screening programs
